R Practice 5

Prof. Santetti

Spring 2026

INSTRUCTIONS: R Practices have the purpose of making students comfortable with the basics of R and R Studio for empirical economic analysis.

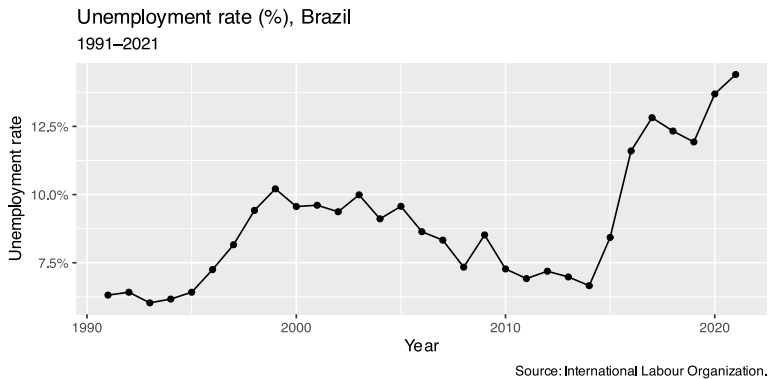

In this practice, you will put to practice the necessary customization tasks to make your plots more informative to *any* audience.

Have fun!

Problem 1

Check out the plots for parts (a) and (b). Working *backwards*, figure out the code that generated the two charts and replicate them. They come from the `brazilian_unemployment.csv` file that you can download from theSpring.

(a)

(b)
